Mobile Extraction System for Laser and Welding Fumes now W3 certified

ULT AG extends its well-proven model series LAS 260 by developing a new extraction system for laser and welding fumes, the LAS 260.HD 19 W3.

The portable device meets the certification requirements according to DIN EN ISO15012-1 welding fume separation class W3.

5th ULT Symposium

On 10th and 11th May 2016 the fifth instalment of the traditional ULT Symposium will take place in Löbau/ Germany. Headlined "Air Handling for New Technologies" the event will see high-class speakers from industry and R/D to present newest theoretical and practical issues and experiences.

Please find the full programme as well as registration opportunities [here](#)

Highest Filtration Rate for Combustible Laser Dusts

ULT AG introduces the LAS 300.81-HFM054, an ATEX certified extraction and filtration unit with H class filtration that is suited for the removal of combustible dusts. It was developed for the removal of flammable dusts according to dust explosion category 1.

Modular Approach for Process Air Drying

Following the introduction of the industrial high-performance dehumidifier ULT Dry-Tec®, ULT AG has developed a completely new modular solution for extremely dry process air. Depending on the process, the new concept helps to achieve dew point temperatures down to -65 °C / -85 °F (dp).
